About Me

Full-stack software engineer specializing in AI-driven analytics, automation, and data integration. I design and deploy intelligent systems that connect business data to actionable insights using technologies such as Python, Django, React, and Snowflake Cortex. With experience spanning cloud infrastructure, data engineering, and AI agents, I build scalable platforms that empower teams to make faster, smarter decisions. My background in marketing further enables me to bridge the gap between technical innovation and business impact.

Technical Skills

Languages	Frameworks	Tools & Platforms
• Python • JavaScript • Ruby • HTML/CSS • SQL	• React • Django • Ruby on Rails • Express/Node.js • Tailwind	• Amazon Web Services • Google Cloud/BigQuery • Snowflake • Git/GitHub • PostgreSQL/MongoDB

Professional Experience

Software Engineer

July 2025 – Present

RADaR Analytics - Columbia, MO (Remote)

- Built and deployed the Campaign Intelligence platform, a full-stack marketing analytics system integrating Snowflake Cortex Agents, Django REST APIs, and React/Tailwind for AI-driven creative insights.
- Modeled and optimized Snowflake datasets for ad performance, creative metadata, and chat history, enabling natural-language Cortex queries over marketing data.
- Developed server-side chat pipelines that log messages, invoke Cortex Agents, and persist contextual conversations for analytics and reporting.
- Deployed application using AWS Elastic Beanstalk, EC2, and EFS-backed persistence, and Lambda.
- Collaborated with marketing teams to build creative performance dashboards using D3.js, tracking CTR, spend efficiency, and top-performing ad traits.

Software Engineer

October 2023 – July 2025

A Cut Above Uniforms - Louisville, CO

- Built a retrieval-augmented generation (RAG) system leveraging Python, Snowflake, and OpenAI embeddings to surface natural-language insights from ad performance and creative data.
- Automated marketing and sales reporting pipelines using Python, Google Analytics, and Matplotlib, reducing manual analysis time by more than 60%.
- Modernized the company's website frontend and user experience, resulting in an 8% increase in conversion rates and improved tracking fidelity across marketing channels.
- Resolved a tax software bug and wrote Python script to locate duplicate transactions in our ERP, leading to the recovery of over \$270,000 in overpaid sales tax.
- Built JavaScript automations in Acumatica to trigger real-time order and backorder notifications, improving customer satisfaction and operational visibility.

Software Engineer

December 2022 – October 2023

HoundDog - Columbia, MO (Remote)

- Implemented a message board with full CRUD functionality within a Ruby on Rails application to improve client communication.
- Automated email and SMS notifications by integrating Brevo and Twilio APIs.
- Designed insurance forms with HTML, CSS, and Bootstrap for a responsive user experience.
- Participated in Agile development processes, including daily stand-ups, code reviews, and Jira-based task management.

Insurance Specialist

November 2019 – August 2022

Unum Insurance Group - Portland, ME

- Processed and calculated benefit payments while ensuring compliance with payroll and tax regulations.
- Managed large datasets in Excel, optimizing payment processing efficiency through automation.
- Collaborated with finance and claims teams to resolve discrepancies, improving customer satisfaction and processing speed.
- Analyzed payroll and tax data to generate actionable insights for stakeholders.

Accountant

April 2018 – June 2019

ALPS Funds - Denver, CO

- Calculated daily net asset values (NAV) for mutual funds, ensuring accurate financial reporting.
- Gained proficiency in Excel-based accounting and Bloomberg Terminal.

Co-Founder

April 2016 – April 2018

BANKR App - Denver, CO

- Led the design and UI/UX process, from wireframes to interactive prototypes.
- Managed Agile development cycles, ensuring alignment between engineering and product vision.
- Implemented robust security measures and API integrations for a scalable and secure platform.

Education

General Assembly - Remote

2022

Software Engineering Immersive

University of Missouri - Columbia, MO

2005 - 2009

BS, Business Administration

Czech University of Life Sciences - Prague, Czech Republic

2008

International Business, Study Abroad
